

HOW TO FIT- PREVIOUSLY OWNED BOOTS

Please follow these steps:

1. Download and print two pages of the [grid paper](#).
2. Place one of the grid papers on a smooth, flat surface.
3. Have the skater wear the socks or tights they will have on when skating.
4.
 - a. Have the skater step onto the grid paper with the center of their heel aligned with one end of the darkest line on the grid paper. The longest toe should be aligned at the other end of the same line.
 - b. Place the other foot parallel and about 6 inches away, not on the paper.
 - c. Bend both ankles so the knees move forward over the toes.
5. Hold a slim pen or pencil perpendicular to the paper and trace around the foot. Do not allow the pen/pencil to angle under the foot as this will distort the correct length.
6. Repeat steps 3, 4 and 5 with the other foot.
7. Using a ruler, measure along the dark line to get the exact length of the foot. Record this along the long line on the paper.
8. Measure across the foot, perpendicular to the long line and record this measurement on the paper
9. With these measurements, find a boot tracing that matches the length + $\frac{1}{4}$ ". The width measurement may be narrower but should be no more than $\frac{1}{4}$ " - $\frac{3}{8}$ ". You can print the template* and compare the two, placing one over the other and holding up to the light to see similarities and differences.
10. Take a picture of each of the feet traced and attach to the order form.
11. And, attach a scanned copy of each of your measuring sheets to your order form. A picture of the forms is okay if you keep the forms flat on the floor.

*When printing the template, be sure the 'fit to paper' option on the printer is left unchecked.
